

F&O Sniper -- Signal P&L Backtest

Capital base Rs 200,000 | 6 resolved trades (2W / 0L / 4 flat) | 6 day span | generated 2026-08-29

■ Small sample -- treat everything below as a rough first look, not a verified edge. Same caution as every other backtest in this project.

NET P&L

Rs 2,860

1.43% of capital deployed -- the bottom line everything else here explains.

WIN RATE

33.3%

2 of 6 trades profitable. A low win rate can still be profitable -- check Profit Factor too.

PROFIT FACTOR

N/A

Total Rs won / total Rs lost. Above 1 = profitable overall, above 1.5 is solid.

MAX DRAWDOWN

N/A

The single worst peak-to-trough decline anywhere in this data -- the real pain of the roughest stretch.

SHARPE RATIO

29.05

Return per unit of total volatility. Above 1 is good, above 2 very good. Needs 2+ days of data.

SORTINO RATIO

N/A

Like Sharpe, but only penalizes downside swings. Usually reads higher than Sharpe.

CALMAR RATIO

N/A

Annual return relative to the worst drawdown -- return earned for the pain endured.

CAGR (ANNUALISED)

N/A

What this rate would compound to over a year. N/A under a week of data -- too short to annualize honestly.

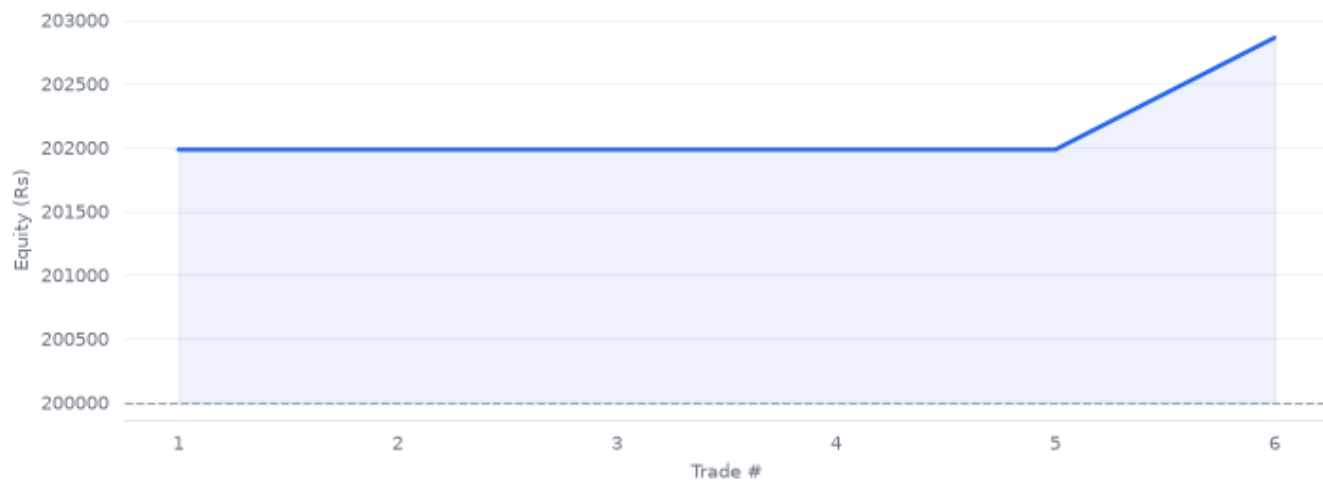

Profit vs Loss Breakdown

Net P&L above is profit minus loss combined into one number. This breaks both sides out separately, so the losses aren't hidden inside the net figure.

Gross Profit (all winning trades)	Rs 2,860
Gross Loss (all losing trades)	Rs 0
Best single trade	Rs 1,982
Worst single trade	Rs 0
Best single day	2026-08-25 Rs 1,982
Worst single day	2026-08-28 Rs 878
Currently underwater	No -- at or above the last peak

Equity Curve

Running account value after every trade, in the order each one actually closed. The dashed line marks where you started (the capital base above) -- above it means net ahead overall, below means net behind.

Drawdown %

How far below the highest point reached so far the account was at each moment, as a %. Always zero or negative -- 0 means sitting at a new high, a deep dip means a real losing stretch that hadn't recovered yet.

Performance by Segment

The same trades, split by Grade, Sector, OI Confirmation, and Pattern -- shows WHERE performance is concentrated instead of one blended number. A segment with very few trades (2-3) isn't a reliable read yet, even if its win rate looks extreme -- same small-sample caution as everywhere else in this report.

By Grade

Segment	Trades	Win Rate	Net P&L (Rs)	Profit Factor
Unknown	6	33.3%	2,860	N/A

By OI Confirmation

Segment	Trades	Win Rate	Net P&L (Rs)	Profit Factor
Unknown	6	33.3%	2,860	N/A

By Pattern

Segment	Trades	Win Rate	Net P&L (Rs)	Profit Factor
Gap up	1	100.0%	1,982	N/A
Gap down	5	20.0%	878	N/A

By Sector

Segment	Trades	Win Rate	Net P&L (Rs)	Profit Factor
Unknown	6	33.3%	2,860	N/A

Worst Drawdowns

The 5 deepest peak-to-trough declines in account value, worst first. 'Recovered' shows when equity climbed back to the pre-drawdown peak -- '--' means it hasn't yet.

No drawdown periods yet.

Daily Return Distribution

How many days landed in each return range. Red bars = losing days, green = winning days. A cluster of tall bars near zero with a few scattered further out is normal -- most days small, a few days big.

Monthly Performance

Total P&L for each calendar month. A month can only show one bar even if it had both winning and losing days inside it -- see Daily Return Distribution above for the day-by-day win/loss split.

Month	P&L (Rs)	Trades
2026-08	2,860	6

Trade Log

All 6 resolved trades, most recent first.

Symbol	Action	Entry Time	Exit Time	Entry	Exit	Qty	P&L (Rs)	Reason
