

F&O Sniper -- Signal P&L Backtest

Capital base Rs 140,738 | 46 resolved trades (25W / 18L / 3 flat) | 7 day span | generated 2026-09-03 | rules v1 (2026-08-30)

Strategy Scorecard

STATUS: PROMISING

PF 2.28, Win Rate 54.3% -- both clear the bar (PF >= 1.5, Win Rate >= 45%).

Fixed, disclosed rule: Promising needs Profit Factor >= 1.5 AND Win Rate >= 45%, both. Below 20 resolved trades it's always Insufficient Sample, regardless of how good the numbers look -- not enough data yet to trust a verdict either way.

Starting Capital (Rs)	140,738
Net P&L (Rs)	56,274
Return %	39.99%
Trades	46
Win Rate	54.3%
Profit Factor	2.28
Expectancy/Trade (Rs)	1223.35
Max Drawdown (Rs / %)	-8,935 / -5.76%
Max Drawdown (R-multiple)	-2.0R
Stop-First Rate	29.2% (7/24 rule-resolved)
Average Win (Rs)	4014.96
Average Loss (Rs)	-2449.99
Winning Days	5
Losing Days	1
Average Holding Time	1h 28m

Data Quality & Integrity

Checked before anything above is trusted, not after. Every check here runs against this backtest's own real entry/exit data -- no assumptions, no simulated data.

DATA STATUS: SUSPECT

Suspect: real timestamp corruption exists, or more than 2% of trades look like exact duplicates. Partial: something else below was flagged but nothing structurally broken. Complete: nothing flagged.

Check	Result
Timestamp Integrity	4 corrupt (exit before entry)
Market Hours (09:15-15:40 IST)	No issues found
Duplicate Signals	2 group(s), 4 trades, look like exact duplicates
Overlapping Positions	1 same-symbol overlap(s) found
Missing/Stale Data	No issues found
Position Sizing	Real per-symbol F&O lot size via lot_size_resolver.py. Capital base = peak real capital committed (sum of qty × entry across every position genuinely open at the same moment, from real timestamps) -- not a flat per-trade guess.
Trading Costs	Not yet modeled -- every P&L figure in this report is gross, not net of brokerage/STT/exchange charges/GST.
Slippage	Not yet modeled.
Liquidity	Not captured -- no volume or bid-ask spread is stored per trade in this project's signal logs.
Corporate Actions	Not captured -- no corporate-action adjustment log exists in this project yet.

Duplicate signal examples

Symbol	Action	Entry Time	Entry	Exit	P&L (Rs)
HDFCBANK	SELL	2026-08-27 14:36	11.6	13.29	1,098
HDFCBANK	SELL	2026-08-27 15:29	11.6	13.29	1,098
BAJAJ-AUTO	BUY	2026-08-28 09:42	273.6	318.49	3,367
BAJAJ-AUTO	BUY	2026-08-28 12:12	273.6	318.49	3,367

NET P&L**Rs 56,274**

39.99% of capital deployed -- the bottom line everything else here explains.

WIN RATE**54.3%**

25 of 46 trades profitable. A low win rate can still be profitable -- check Profit Factor too.

PROFIT FACTOR**2.28**

Total Rs won / total Rs lost. Above 1 = profitable overall, above 1.5 is solid.

MAX DRAWDOWN**-5.76%**

The single worst peak-to-trough decline anywhere in this data -- the real pain of the roughest stretch.

SHARPE RATIO**13.13**

Return per unit of total volatility. Above 1 is good, above 2 very good. Needs 2+ days of data.

SORTINO RATIO**57.78**

Like Sharpe, but only penalizes downside swings. Usually reads higher than Sharpe.

CALMAR RATIO**N/A**

Annual return relative to the worst drawdown -- return earned for the pain endured.

CAGR (ANNUALISED)**N/A**

What this rate would compound to over a year. N/A under a week of data -- too short to annualize honestly.

Profit vs Loss Breakdown

Net P&L above is profit minus loss combined into one number. This breaks both sides out separately, so the losses aren't hidden inside the net figure.

Gross Profit (all winning trades)	Rs 100,374
Gross Loss (all losing trades)	Rs -44,100
Best single trade	Rs 11,925
Worst single trade	Rs -6,239
Best single day	2026-09-02 Rs 27,643
Worst single day	2026-09-03 Rs -6,312
Currently underwater	Rs -8,449 (-4.11%) since 2026-09-03

Equity Curve

Running account value after every trade, in the order each one actually closed. The dashed line marks where you started (the capital base above) -- above it means net ahead overall, below means net behind.

Drawdown %

How far below the highest point reached so far the account was at each moment, as a %. Always zero or negative -- 0 means sitting at a new high, a deep dip means a real losing stretch that hadn't recovered yet.

R-Multiple Analysis

How many multiples of initial risk (Entry minus SL) each trade returned, independent of position size or premium level -- a Rs 5-risk trade that made Rs 15 is +3R the same as a Rs 50-risk trade that made Rs 150. This is what actually measures setup quality; rupee P&L above doesn't.

Average R	+0.23R
Median R	+0.04R
Best single trade	+2.15R
Worst single trade	-1.00R
Trades $\geq +1R$	13.0%
Trades $\geq +2R$	2.2%
Trades $\leq -1R$	15.2%
Average winning R	+0.81R
Average losing R	-0.54R

Based on 46 of 46 resolved trades with a valid Entry/SL pair to compute Initial Risk from.

Long vs Short

The same trades split by direction (BUY = bullish, SELL = bearish). Two strategies can share one blended win rate while one side is doing all the work -- this checks whether the edge genuinely holds in both directions rather than assuming it does.

Metric	BUY	SELL
Trades	29	17
Win Rate	51.7%	58.8%
Net P&L (Rs)	37,540	18,734
Profit Factor	2.16	2.59
Expectancy/Trade (Rs)	1,294	1,102
Average R	+0.23R	+0.25R
Avg Holding Time	1h 44m	1h 2m

Time-of-Day Analysis

The same trades split by when they entered, not when they resolved -- finds whether the edge is concentrated in a specific window (e.g. the open) or spread evenly across the day. A window with very few trades isn't a reliable read yet, same small-sample caution as everywhere else in this report.

Time Window	Trades	Win Rate	Net P&L (Rs)	Profit Factor	Avg R
09:15-10:00	12	66.7%	35,171	4.67	+0.47R
10:00-11:00	6	66.7%	935	1.08	+0.04R
11:00-12:00	7	42.9%	5,144	1.87	+0.19R
12:00-13:00	6	50.0%	8,267	3.13	+0.19R
13:00-14:00	3	33.3%	4,904	1.94	+0.07R
14:00-15:30	8	62.5%	3,051	1.47	+0.32R

4 trade(s) had an entry time outside 09:15-15:30 entirely and are excluded from every window above rather than forced into the nearest one -- see Data Quality & Integrity's Market Hours check.

Exit Analysis

How every trade actually ended: a real Target hit, a real Stop hit, or an estimated end-of-day mark because neither triggered. Shows where P&L and R actually come from, not just how many trades of each type there were.

Exit Reason	Trades	% of Total	Net P&L (Rs)	Avg R
T1	11	23.9%	45,026	+0.89R
T2	5	10.9%	37,948	+1.43R
T3	1	2.2%	11,925	+2.15R
SL	7	15.2%	-30,477	-1.00R
Closed (EOD/manual)	22	47.8%	-8,148	-0.06R

T1 23.9% of trades (avg +0.89R); T2 10.9% of trades (avg +1.43R); T3 2.2% of trades (avg +2.15R). A further target reaching a higher average R than an earlier one is expected by construction (it's a larger price move by definition) -- it doesn't by itself answer whether MORE trades could have reached that target if held past an earlier exit. That needs the price path AFTER each exit (MFE/MAE), which this project's signal logs don't capture -- only entry and the single exit price are logged, never an intratrade series. Answered honestly: not enough data to say whether winners are cut too early, only how the trades that already happened broke down.

Time to Target

Level	Trades Reaching It	Avg Time	Median Time
SL	7	1h 52m	1h 24m
Target 1	17	1h 53m	1h 24m
Target 2	6	2h 47m	2h 43m
Target 3	1	3h 26m	3h 26m

Score Bucket Calibration

Whether the score actually predicts outcomes, or just ranks candidates. Target-before-SL rate/R figures use rule-resolved trades only within each bucket (an EOD mark isn't evidence the score predicted anything). A monotonic climb from low buckets to high supports treating the score as meaningful; a flat or inconsistent pattern means it currently doesn't, regardless of what any single bucket's number looks like in isolation.

Score Bucket	Sample (rule-resolved)	Target-before-SL Rate	Avg R	Median R
85-89	18 ■	66.7%	0.38	0.893
90+	6 ■	83.3%	0.876	0.894

■ = below the 20-trade floor this project uses everywhere else -- treat that bucket's row as a first look, not a verified figure.

Blended vs. Rule-Resolved Only

The Scorecard above includes every exit type, EOD/manual marks included. This isolates ONLY trades that hit a real SL or Target, to show whether the entry/exit rules themselves have an edge, separate from how many positions just ran out of trading day.

N/A -- no trades hit a real SL or Target in this period (every resolved trade was an EOD/manual mark).

Streaks & Risk

Consecutive win/loss runs and the single biggest swings -- the operational risk a blended win rate and profit factor don't show: how long a real losing run can feel, and how much any one trade, day, or week can move the account.

Max Winning Streak	4 trades
Max Losing Streak	6 trades
Average Winning Streak	2.08 trades
Average Losing Streak	1.64 trades
Largest Single-Trade Gain	11,925
Largest Single-Trade Loss	-6,239
Best Single Day	2026-09-02 (Rs 27,643)
Worst Single Day	2026-09-03 (Rs -6,312)
Best Week	Week of 2026-08-31 (Rs 34,480)
Worst Week	Week of 2026-08-24 (Rs 21,795)

Robustness: Trade-Order Resampling

Reshuffles this backtest's own real trade outcomes thousands of times -- same wins, same losses, same win rate, just a different order -- to see how much worse these SAME trades could plausibly have looked from unlucky sequencing alone. Does not test different market conditions, position sizing, or costs/slippage -- those need a real cost model that doesn't exist in this project yet (see Trading Costs on the Data Quality page).

Metric	Actual (this backtest)	Simulated Median	Worst-Case (5%)	Single Worst (of 2000)
Max Drawdown %	-5.76%	-7.29%	-12.19%	-18.35%
Max Losing Streak	6 trades	3 trades	6 trades	10 trades

2,000 simulations, fixed seed 42 -- exactly reproducible on a re-run of this same trade data, not a fresh random draw each time.

Performance by Segment

The same trades, split by Grade, Sector, OI Confirmation, and Pattern -- shows WHERE performance is concentrated instead of one blended number. Sample column, fixed disclosed thresholds: under 10 trades is Low (do not optimize on it), 10-29 is Preliminary, 30+ is More reliable -- still not proof. Never treat a tiny 100% segment as stronger evidence than a large one just because the percentage looks better.

- Pattern "OI-Confirmed Momentum" outperforms "Range-Pinned" by Rs 5,502 net (25 vs 21 trades).

By Grade

Segment	Trades	Sample	Win Rate	Net P&L (Rs)	Profit Factor
A	45	Reliable	55.6%	57,422	2.34
A+	1	Low	0.0%	-1,148	0.0

By OI Confirmation

Segment	Trades	Sample	Win Rate	Net P&L (Rs)	Profit Factor
CONFIRMED	46	Reliable	54.3%	56,274	2.28

By Pattern

Segment	Trades	Sample	Win Rate	Net P&L (Rs)	Profit Factor
OI-Confirmed Momentum	25	Preliminary	48.0%	30,888	2.1
Range-Pinned	21	Preliminary	61.9%	25,386	2.57

By Sector

Segment	Trades	Sample	Win Rate	Net P&L (Rs)	Profit Factor
E-Commerce	2	Low	100.0%	14,166	N/A

Pharma	2	Low	0.0%	-1,578	0.0
FMCG	3	Low	0.0%	-3,228	0.0
Power	2	Low	0.0%	-3,520	0.0
Auto Anc	2	Low	0.0%	-4,516	0.0
Plastics	1	Low	0.0%	-5,312	0.0

Worst Drawdowns

The 5 deepest peak-to-trough declines in account value, worst first. 'Recovered' shows when equity climbed back to the pre-drawdown peak -- '-' means it hasn't yet. 'Trades' is how many trades closed while still underwater, from the peak to recovery (or to now, if still Ongoing).

#	Depth (Rs)	Depth %	Peak Date	Trough Date	Recovered	Status	Trades
1	-8,935	-5.76%	2026-08-27 13:47	2026-08-27 15:30	2026-08-28 09:52	Recovered	13
2	-8,645	-5.21%	2026-08-28 14:56	2026-08-31 11:51	2026-08-31 13:55	Recovered	7
3	-8,449	-4.11%	2026-09-03 13:33	2026-09-03 15:16	--	Ongoing	2
4	-6,080	-3.59%	2026-08-31 15:30	2026-08-31 15:30	2026-09-01 15:15	Recovered	3
5	-4,516	-2.45%	2026-09-02 10:04	2026-09-02 11:04	2026-09-02 14:21	Recovered	2

Daily Return Distribution

How many days landed in each return range. Red bars = losing days, green = winning days. A cluster of tall bars near zero with a few scattered further out is normal -- most days small, a few days big.

Monthly Performance

Total P&L for each calendar month. A month can only show one bar even if it had both winning and losing days inside it -- see Daily Return Distribution above for the day-by-day win/loss split.

Month	P&L (Rs)	Trades
2026-08	26,422	35
2026-09	29,852	11

Trade Log

All 46 resolved trades, most recent first.
