

# F&O Sniper -- Signal P&L Backtest

Capital base Rs 200,000 | 13 resolved trades (1W / 5L / 7 flat) | 13 day span | generated 2026-09-06 | rules v1 (2026-08-30)

■ *Small sample -- treat everything below as a rough first look, not a verified edge. Same caution as every other backtest in this project.*

## Strategy Scorecard

### STATUS: INSUFFICIENT SAMPLE

Only 13 resolved trades -- below the 20-trade floor to trust a verdict either way.

*Fixed, disclosed rule: Promising needs Profit Factor  $\geq 1.5$  AND Win Rate  $\geq 45\%$ , both. Below 20 resolved trades it's always Insufficient Sample, regardless of how good the numbers look -- not enough data yet to trust a verdict either way.*

|                           |                   |
|---------------------------|-------------------|
| Starting Capital (Rs)     | 200,000           |
| Net P&L (Rs)              | -22,217           |
| Return %                  | -11.11%           |
| Trades                    | 13                |
| Win Rate                  | 7.7%              |
| Profit Factor             | 0.08              |
| Expectancy/Trade (Rs)     | -1709.0           |
| Max Drawdown (Rs / %)     | -24,200 / -11.98% |
| Max Drawdown (R-multiple) | N/A               |
| Stop-First Rate           | N/A               |

|                      |         |
|----------------------|---------|
| Average Win (Rs)     | 1982.5  |
| Average Loss (Rs)    | -4839.9 |
| Winning Days         | 1       |
| Losing Days          | 5       |
| Average Holding Time | 25h 41m |

## Data Quality & Integrity

Checked before anything above is trusted, not after. Every check here runs against this backtest's own real entry/exit data -- no assumptions, no simulated data.

### DATA STATUS: SUSPECT

*Suspect: real timestamp corruption exists, or more than 2% of trades look like exact duplicates. Partial: something else below was flagged but nothing structurally broken. Complete: nothing flagged.*

| Check                          | Result                                                                                                                                                                                                                              |
|--------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Timestamp Integrity            | No issues found                                                                                                                                                                                                                     |
| Market Hours (09:15-15:40 IST) | No issues found                                                                                                                                                                                                                     |
| Duplicate Signals              | <b>2 group(s), 4 trades, look like exact duplicates</b>                                                                                                                                                                             |
| Overlapping Positions          | No issues found                                                                                                                                                                                                                     |
| Missing/Stale Data             | No issues found                                                                                                                                                                                                                     |
| Position Sizing                | Real per-symbol F&O lot size via lot_size_resolver.py. Capital base = peak real capital committed (sum of qty × entry across every position genuinely open at the same moment, from real timestamps) -- not a flat per-trade guess. |
| Trading Costs                  | Not yet modeled -- every P&L figure in this report is gross, not net of brokerage/STT/exchange charges/GST.                                                                                                                         |
| Slippage                       | Not yet modeled.                                                                                                                                                                                                                    |
| Liquidity                      | Not captured -- no volume or bid-ask spread is stored per trade in this project's signal logs.                                                                                                                                      |
| Corporate Actions              | Not captured -- no corporate-action adjustment log exists in this project yet.                                                                                                                                                      |

#### Duplicate signal examples

| Symbol | Action | Entry Time       | Entry   | Exit    | P&L (Rs) |
|--------|--------|------------------|---------|---------|----------|
| NIFTY  | BUY    | 2026-08-25 09:29 | 24252.5 | 24252.5 | 0        |
| NIFTY  | BUY    | 2026-08-25 12:19 | 24252.5 | 24252.5 | 0        |
| NIFTY  | SELL   | 2026-08-25 09:46 | 24252.5 | 24252.5 | 0        |
| NIFTY  | SELL   | 2026-08-25 12:46 | 24252.5 | 24252.5 | 0        |

**NET P&L****Rs -22,217**

-11.11% of capital deployed -- the bottom line everything else here explains.

**WIN RATE****7.7%**

1 of 13 trades profitable. A low win rate can still be profitable -- check Profit Factor too.

**PROFIT FACTOR****0.08**

Total Rs won / total Rs lost. Above 1 = profitable overall, above 1.5 is solid.

**MAX DRAWDOWN****-11.98%**

The single worst peak-to-trough decline anywhere in this data -- the real pain of the roughest stretch.

**SHARPE RATIO****-13.18**

Return per unit of total volatility. Above 1 is good, above 2 very good. Needs 2+ days of data.

**SORTINO RATIO****-10.8**

Like Sharpe, but only penalizes downside swings. Usually reads higher than Sharpe.

**CALMAR RATIO****N/A**

Annual return relative to the worst drawdown -- return earned for the pain endured.

**CAGR (ANNUALISED)****N/A**

What this rate would compound to over a year. N/A under a week of data -- too short to annualize honestly.

## Profit vs Loss Breakdown

Net P&L above is profit minus loss combined into one number. This breaks both sides out separately, so the losses aren't hidden inside the net figure.

|                                   |                                       |
|-----------------------------------|---------------------------------------|
| Gross Profit (all winning trades) | Rs 1,982                              |
| Gross Loss (all losing trades)    | Rs -24,200                            |
| Best single trade                 | Rs 1,982                              |
| Worst single trade                | Rs -9,418                             |
| Best single day                   | 2026-08-25 Rs 1,982                   |
| Worst single day                  | 2026-09-01 Rs -9,418                  |
| Currently underwater              | Rs -24,200 (-11.98%) since 2026-08-25 |

## Equity Curve

Running account value after every trade, in the order each one actually closed. The dashed line marks where you started (the capital base above) -- above it means net ahead overall, below means net behind.

## Drawdown %

How far below the highest point reached so far the account was at each moment, as a %. Always zero or negative -- 0 means sitting at a new high, a deep dip means a real losing stretch that hadn't recovered yet.

## R-Multiple Analysis

How many multiples of initial risk (Entry minus SL) each trade returned, independent of position size or premium level -- a Rs 5-risk trade that made Rs 15 is +3R the same as a Rs 50-risk trade that made Rs 150. This is what actually measures setup quality; rupee P&L above doesn't.

N/A -- no trade in this backtest had a valid Entry/SL pair to compute Initial Risk from.

## Long vs Short

The same trades split by direction (BUY = bullish, SELL = bearish). Two strategies can share one blended win rate while one side is doing all the work -- this checks whether the edge genuinely holds in both directions rather than assuming it does.

| Metric                | BUY     | SELL   |
|-----------------------|---------|--------|
| Trades                | 6       | 7      |
| Win Rate              | 0.0%    | 14.3%  |
| Net P&L (Rs)          | -18,031 | -4,186 |
| Profit Factor         | 0.0     | 0.32   |
| Expectancy/Trade (Rs) | -3,005  | -598   |
| Average R             | N/A     | N/A    |
| Avg Holding Time      | 34h 37m | 18h 2m |

# Time-of-Day Analysis

The same trades split by when they entered, not when they resolved -- finds whether the edge is concentrated in a specific window (e.g. the open) or spread evenly across the day. A window with very few trades isn't a reliable read yet, same small-sample caution as everywhere else in this report.

| Time Window | Trades | Win Rate | Net P&L (Rs) | Profit Factor | Avg R |
|-------------|--------|----------|--------------|---------------|-------|
| 09:15-10:00 | 4      | 0.0%     | 0            | N/A           | N/A   |
| 10:00-11:00 | 1      | 0.0%     | -1,072       | 0.0           | N/A   |
| 11:00-12:00 | 1      | 0.0%     | -6,168       | 0.0           | N/A   |
| 12:00-13:00 | 3      | 0.0%     | -9,418       | 0.0           | N/A   |
| 13:00-14:00 | 1      | 0.0%     | 0            | N/A           | N/A   |
| 14:00-15:30 | 2      | 0.0%     | -7,540       | 0.0           | N/A   |

1 trade(s) had an entry time outside 09:15-15:30 entirely and are excluded from every window above rather than forced into the nearest one -- see Data Quality & Integrity's Market Hours check.

## Exit Analysis

How every trade actually ended: a real Target hit, a real Stop hit, or an estimated end-of-day mark because neither triggered. Shows where P&L and R actually come from, not just how many trades of each type there were.

| Exit Reason | Trades | % of Total | Net P&L (Rs) | Avg R |
|-------------|--------|------------|--------------|-------|
| Other       | 13     | 100.0%     | -22,217      | N/A   |

No Target-hit exits in this data to compare -- MFE/MAE would need the intratrade price path regardless, which this project's signal logs don't capture.

## Time to Target

N/A -- no trade in this backtest has a real Hit At timestamp to measure from.

## Score Bucket Calibration

Whether the score actually predicts outcomes, or just ranks candidates. Target-before-SL rate/R figures use rule-resolved trades only within each bucket (an EOD mark isn't evidence the score predicted anything). A monotonic climb from low buckets to high supports treating the score as meaningful; a flat or inconsistent pattern means it currently doesn't, regardless of what any single bucket's number looks like in isolation.

N/A -- no trade in this backtest has a real logged Confidence value to bucket by.

## Blended vs. Rule-Resolved Only

The Scorecard above includes every exit type, EOD/manual marks included. This isolates ONLY trades that hit a real SL or Target, to show whether the entry/exit rules themselves have an edge, separate from how many positions just ran out of trading day.

N/A -- no trades hit a real SL or Target in this period (every resolved trade was an EOD/manual mark).

## Streaks & Risk

Consecutive win/loss runs and the single biggest swings -- the operational risk a blended win rate and profit factor don't show: how long a real losing run can feel, and how much any one trade, day, or week can move the account.

|                           |                                 |
|---------------------------|---------------------------------|
| Max Winning Streak        | 1 trades                        |
| Max Losing Streak         | 2 trades                        |
| Average Winning Streak    | 1.0 trades                      |
| Average Losing Streak     | 1.25 trades                     |
| Largest Single-Trade Gain | 1,982                           |
| Largest Single-Trade Loss | -9,418                          |
| Best Single Day           | 2026-08-25 (Rs 1,982)           |
| Worst Single Day          | 2026-09-01 (Rs -9,418)          |
| Best Week                 | Week of 2026-08-24 (Rs 1,982)   |
| Worst Week                | Week of 2026-08-31 (Rs -24,200) |

## Robustness: Trade-Order Resampling

*Reshuffles this backtest's own real trade outcomes thousands of times -- same wins, same losses, same win rate, just a different order -- to see how much worse these SAME trades could plausibly have looked from unlucky sequencing alone. Does not test different market conditions, position sizing, or costs/slippage -- those need a real cost model that doesn't exist in this project yet (see Trading Costs on the Data Quality page).*

*N/A -- needs at least 30 resolved trades for resampling to say anything beyond what Streaks & Risk already shows.*

## Performance by Segment

The same trades, split by Grade, Sector, OI Confirmation, and Pattern -- shows WHERE performance is concentrated instead of one blended number. Sample column, fixed disclosed thresholds: under 10 trades is Low (do not optimize on it), 10-29 is Preliminary, 30+ is More reliable -- still not proof. Never treat a tiny 100% segment as stronger evidence than a large one just because the percentage looks better.

### By Grade

| Segment | Trades | Sample      | Win Rate | Net P&L (Rs) | Profit Factor |
|---------|--------|-------------|----------|--------------|---------------|
| Unknown | 13     | Preliminary | 7.7%     | -22,217      | 0.08          |

### By OI Confirmation

| Segment | Trades | Sample      | Win Rate | Net P&L (Rs) | Profit Factor |
|---------|--------|-------------|----------|--------------|---------------|
| Unknown | 13     | Preliminary | 7.7%     | -22,217      | 0.08          |

### By Pattern

| Segment  | Trades | Sample | Win Rate | Net P&L (Rs) | Profit Factor |
|----------|--------|--------|----------|--------------|---------------|
| Gap down | 7      | Low    | 0.0%     | -1,566       | 0.0           |
| Gap up   | 6      | Low    | 16.7%    | -20,650      | 0.09          |

### By Sector

| Segment | Trades | Sample      | Win Rate | Net P&L (Rs) | Profit Factor |
|---------|--------|-------------|----------|--------------|---------------|
| Unknown | 13     | Preliminary | 7.7%     | -22,217      | 0.08          |

## Worst Drawdowns

The 5 deepest peak-to-trough declines in account value, worst first. 'Recovered' shows when equity climbed back to the pre-drawdown peak -- '-' means it hasn't yet. 'Trades' is how many trades closed while still underwater, from the peak to recovery (or to now, if still Ongoing).

| # | Depth (Rs) | Depth % | Peak Date        | Trough Date      | Recovered | Status  | Trades |
|---|------------|---------|------------------|------------------|-----------|---------|--------|
| 1 | -24,200    | -11.98% | 2026-08-25 14:31 | 2026-09-04 13:27 | --        | Ongoing | 8      |

## Daily Return Distribution

How many days landed in each return range. Red bars = losing days, green = winning days. A cluster of tall bars near zero with a few scattered further out is normal -- most days small, a few days big.

## Monthly Performance

Total P&L for each calendar month. A month can only show one bar even if it had both winning and losing days inside it -- see Daily Return Distribution above for the day-by-day win/loss split.

| Month   | P&L (Rs) | Trades |
|---------|----------|--------|
| 2026-08 | 1,488    | 7      |
| 2026-09 | -23,706  | 6      |

## Trade Log

All 13 resolved trades, most recent first.

| Symbol | Action | Entry Time       | Exit Time        | Entry    | Exit     | Qty | P&L (Rs) | Reason                |
|--------|--------|------------------|------------------|----------|----------|-----|----------|-----------------------|
| NIFTY  | SELL   | 2026-09-03 11:14 | 2026-09-04 13:27 | 23975.10 | 24070.00 | 65  | -6,168   | End of logged history |
| NIFTY  | BUY    | 2026-09-02 10:39 | 2026-09-03 11:14 | 23991.60 | 23975.10 | 65  | -1,072   | Bias flipped opposite |
| NIFTY  | SELL   | 2026-09-02 09:26 | 2026-09-02 10:39 | 23991.60 | 23991.60 | 65  | 0        | Bias flipped opposite |
