

# F&O Sniper -- Signal P&L Backtest

Capital base Rs 140,738 | 46 resolved trades (25W / 18L / 3 flat) | 7 day span | generated 2026-09-03 | rules v1 (2026-08-30)

## Strategy Scorecard

### STATUS: PROMISING

PF 2.28, Win Rate 54.3% -- both clear the bar (PF  $\geq 1.5$ , Win Rate  $\geq 45\%$ ).

*Fixed, disclosed rule: Promising needs Profit Factor  $\geq 1.5$  AND Win Rate  $\geq 45\%$ , both. Below 20 resolved trades it's always Insufficient Sample, regardless of how good the numbers look -- not enough data yet to trust a verdict either way.*

|                           |                            |
|---------------------------|----------------------------|
| Starting Capital (Rs)     | 140,738                    |
| Net P&L (Rs)              | 56,274                     |
| Return %                  | 39.99%                     |
| Trades                    | 46                         |
| Win Rate                  | 54.3%                      |
| Profit Factor             | 2.28                       |

| Winning Days              | 5                          |
| Losing Days               | 1                          |
| Average Holding Time      | 1h 28m                     |

## Data Quality & Integrity

Checked before anything above is trusted, not after. Every check here runs against this backtest's own real entry/exit data -- no assumptions, no simulated data.

### DATA STATUS: SUSPECT

*Suspect: real timestamp corruption exists, or more than 2% of trades look like exact duplicates. Partial: something else below was flagged but nothing structurally broken. Complete: nothing flagged.*

| Check                          | Result                                                                                                                                                                                                                              |
|--------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Timestamp Integrity            | <b>4 corrupt (exit before entry)</b>                                                                                                                                                                                                |
| Market Hours (09:15-15:40 IST) | No issues found                                                                                                                                                                                                                     |
| Duplicate Signals              | <b>2 group(s), 4 trades, look like exact duplicates</b>                                                                                                                                                                             |
| Overlapping Positions          | <b>1 same-symbol overlap(s) found</b>                                                                                                                                                                                               |
| Missing/Stale Data             | No issues found                                                                                                                                                                                                                     |
| Position Sizing                | Real per-symbol F&O lot size via lot_size_resolver.py. Capital base = peak real capital committed (sum of qty × entry across every position genuinely open at the same moment, from real timestamps) -- not a flat per-trade guess. |
| Trading Costs                  | Not yet modeled -- every P&L figure in this report is gross, not net of brokerage/STT/exchange charges/GST.                                                                                                                         |
| Slippage                       | Not yet modeled.                                                                                                                                                                                                                    |
| Liquidity                      | Not captured -- no volume or bid-ask spread is stored per trade in this project's signal logs.                                                                                                                                      |
| Corporate Actions              | Not captured -- no corporate-action adjustment log exists in this project yet.                                                                                                                                                      |

### Duplicate signal examples

| Symbol     | Action | Entry Time       | Entry | Exit   | P&L (Rs) |
|------------|--------|------------------|-------|--------|----------|
| HDFCBANK   | SELL   | 2026-08-27 14:36 | 11.6  | 13.29  | 1,098    |
| HDFCBANK   | SELL   | 2026-08-27 15:29 | 11.6  | 13.29  | 1,098    |
| BAJAJ-AUTO | BUY    | 2026-08-28 09:42 | 273.6 | 318.49 | 3,367    |
| BAJAJ-AUTO | BUY    | 2026-08-28 12:12 | 273.6 | 318.49 | 3,367    |

**NET P&L****Rs 56,274**

39.99% of capital deployed -- the bottom line everything else here explains.

**WIN RATE****54.3%**

25 of 46 trades profitable. A low win rate can still be profitable -- check Profit Factor too.

**PROFIT FACTOR****2.28**

Total Rs won / total Rs lost. Above 1 = profitable overall, above 1.5 is solid.

**MAX DRAWDOWN****-5.76%**

The single worst peak-to-trough decline anywhere in this data -- the real pain of the roughest stretch.

**SHARPE RATIO****13.13**

Return per unit of total volatility. Above 1 is good, above 2 very good. Needs 2+ days of data.

**SORTINO RATIO****57.78**

Like Sharpe, but only penalizes downside swings. Usually reads higher than Sharpe.

**CALMAR RATIO****N/A**

Annual return relative to the worst drawdown -- return earned for the pain endured.

**CAGR (ANNUALISED)****N/A**

What this rate would compound to over a year. N/A under a week of data -- too short to annualize honestly.

## Profit vs Loss Breakdown

Net P&L above is profit minus loss combined into one number. This breaks both sides out separately, so the losses aren't hidden inside the net figure.

|                                   |                                     |
|-----------------------------------|-------------------------------------|
| Gross Profit (all winning trades) | Rs 100,374                          |
| Gross Loss (all losing trades)    | Rs -44,100                          |
| Best single trade                 | Rs 11,925                           |
| Worst single trade                | Rs -6,239                           |
| Best single day                   | 2026-09-02 Rs 27,643                |
| Worst single day                  | 2026-09-03 Rs -6,312                |
| Currently underwater              | Rs -8,449 (-4.11%) since 2026-09-03 |

## Equity Curve

Running account value after every trade, in the order each one actually closed. The dashed line marks where you started (the capital base above) -- above it means net ahead overall, below means net behind.

## Drawdown %

How far below the highest point reached so far the account was at each moment, as a %. Always zero or negative -- 0 means sitting at a new high, a deep dip means a real losing stretch that hadn't recovered yet.

## R-Multiple Analysis

How many multiples of initial risk (Entry minus SL) each trade returned, independent of position size or premium level -- a Rs 5-risk trade that made Rs 15 is +3R the same as a Rs 50-risk trade that made Rs 150. This is what actually measures setup quality; rupee P&L above doesn't.

|                    |        |
|--------------------|--------|
| Average R          | +0.23R |
| Median R           | +0.04R |
| Best single trade  | +2.15R |
| Worst single trade | -1.00R |
| Trades $\geq +1R$  | 13.0%  |
| Trades $\geq +2R$  | 2.2%   |
| Trades $\leq -1R$  | 15.2%  |
| Average winning R  | +0.81R |
| Average losing R   | -0.54R |

Based on 46 of 46 resolved trades with a valid Entry/SL pair to compute Initial Risk from.

## Long vs Short

The same trades split by direction (BUY = bullish, SELL = bearish). Two strategies can share one blended win rate while one side is doing all the work -- this checks whether the edge genuinely holds in both directions rather than assuming it does.

| Metric                | BUY    | SELL   |
|-----------------------|--------|--------|
| Trades                | 29     | 17     |
| Win Rate              | 51.7%  | 58.8%  |
| Net P&L (Rs)          | 37,540 | 18,734 |
| Profit Factor         | 2.16   | 2.59   |
| Expectancy/Trade (Rs) | 1,294  | 1,102  |
| Average R             | +0.23R | +0.25R |
| Avg Holding Time      | 1h 44m | 1h 2m  |

# Time-of-Day Analysis

The same trades split by when they entered, not when they resolved -- finds whether the edge is concentrated in a specific window (e.g. the open) or spread evenly across the day. A window with very few trades isn't a reliable read yet, same small-sample caution as everywhere else in this report.

| Time Window | Trades | Win Rate | Net P&L (Rs) | Profit Factor | Avg R  |
|-------------|--------|----------|--------------|---------------|--------|
| 09:15-10:00 | 12     | 66.7%    | 35,171       | 4.67          | +0.47R |
| 10:00-11:00 | 6      | 66.7%    | 935          | 1.08          | +0.04R |
| 11:00-12:00 | 7      | 42.9%    | 5,144        | 1.87          | +0.19R |
| 12:00-13:00 | 6      | 50.0%    | 8,267        | 3.13          | +0.19R |
| 13:00-14:00 | 3      | 33.3%    | 4,904        | 1.94          | +0.07R |
| 14:00-15:30 | 8      | 62.5%    | 3,051        | 1.47          | +0.32R |

4 trade(s) had an entry time outside 09:15-15:30 entirely and are excluded from every window above rather than forced into the nearest one -- see Data Quality & Integrity's Market Hours check.

## Exit Analysis

How every trade actually ended: a real Target hit, a real Stop hit, or an estimated end-of-day mark because neither triggered. Shows where P&L and R actually come from, not just how many trades of each type there were.

| Exit Reason         | Trades | % of Total | Net P&L (Rs) | Avg R  |
|---------------------|--------|------------|--------------|--------|
| T1                  | 11     | 23.9%      | 45,026       | +0.89R |
| T2                  | 5      | 10.9%      | 37,948       | +1.43R |
| T3                  | 1      | 2.2%       | 11,925       | +2.15R |
| SL                  | 7      | 15.2%      | -30,477      | -1.00R |
| Closed (EOD/manual) | 22     | 47.8%      | -8,148       | -0.06R |

T1 23.9% of trades (avg +0.89R); T2 10.9% of trades (avg +1.43R); T3 2.2% of trades (avg +2.15R). A further target reaching a higher average R than an earlier one is expected by construction (it's a larger price move by definition) -- it doesn't by itself answer whether MORE trades could have reached that target if held past an earlier exit. That needs the price path AFTER each exit (MFE/MAE), which this project's signal logs don't capture -- only entry and the single exit price are logged, never an intratrade series. Answered honestly: not enough data to say whether winners are cut too early, only how the trades that already happened broke down.

## Time to Target

| Level    | Trades Reaching It | Avg Time | Median Time |
|----------|--------------------|----------|-------------|
| SL       | 7                  | 1h 52m   | 1h 24m      |
| Target 1 | 17                 | 1h 53m   | 1h 24m      |
| Target 2 | 6                  | 2h 47m   | 2h 43m      |
| Target 3 | 1                  | 3h 26m   | 3h 26m      |

## Score Bucket Calibration

Whether the score actually predicts outcomes, or just ranks candidates. Target-before-SL rate/R figures use rule-resolved trades only within each bucket (an EOD mark isn't evidence the score predicted anything). A monotonic climb from low buckets to high supports treating the score as meaningful; a flat or inconsistent pattern means it currently doesn't, regardless of what any single bucket's number looks like in isolation.

| Score Bucket | Sample (rule-resolved) | Target-before-SL Rate | Avg R | Median R |
|--------------|------------------------|-----------------------|-------|----------|
| 85-89        | 18 ■                   | 66.7%                 | 0.38  | 0.893    |
| 90+          | 6 ■                    | 83.3%                 | 0.876 | 0.894    |

■ = below the 20-trade floor this project uses everywhere else -- treat that bucket's row as a first look, not a verified figure.

**Blended vs. Rule-Resolved Only**

*The Scorecard above includes every exit type, EOD/manual marks included. This isolates ONLY trades that hit a real SL or Target, to show whether the entry/exit rules themselves have an edge, separate from how many positions just ran out of trading day.*

*N/A -- no trades hit a real SL or Target in this period (every resolved trade was an EOD/manual mark).*

## Streaks & Risk

Consecutive win/loss runs and the single biggest swings -- the operational risk a blended win rate and profit factor don't show: how long a real losing run can feel, and how much any one trade, day, or week can move the account.

|                           |                                |
|---------------------------|--------------------------------|
| Max Winning Streak        | 4 trades                       |
| Max Losing Streak         | 6 trades                       |
| Average Winning Streak    | 2.08 trades                    |
| Average Losing Streak     | 1.64 trades                    |
| Largest Single-Trade Gain | 11,925                         |
| Largest Single-Trade Loss | -6,239                         |
| Best Single Day           | 2026-09-02 (Rs 27,643)         |
| Worst Single Day          | 2026-09-03 (Rs -6,312)         |
| Best Week                 | Week of 2026-08-31 (Rs 34,480) |
| Worst Week                | Week of 2026-08-24 (Rs 21,795) |

## Robustness: Trade-Order Resampling

Reshuffles this backtest's own real trade outcomes thousands of times -- same wins, same losses, same win rate, just a different order -- to see how much worse these SAME trades could plausibly have looked from unlucky sequencing alone. Does not test different market conditions, position sizing, or costs/slippage -- those need a real cost model that doesn't exist in this project yet (see Trading Costs on the Data Quality page).

| Metric            | Actual (this backtest) | Simulated Median | Worst-Case (5%) | Single Worst (of 2000) |
|-------------------|------------------------|------------------|-----------------|------------------------|
| Max Drawdown %    | -5.76%                 | -7.29%           | -12.19%         | -18.35%                |
| Max Losing Streak | 6 trades               | 3 trades         | 6 trades        | 10 trades              |

2,000 simulations, fixed seed 42 -- exactly reproducible on a re-run of this same trade data, not a fresh random draw each time.

## Performance by Segment

The same trades, split by Grade, Sector, OI Confirmation, and Pattern -- shows WHERE performance is concentrated instead of one blended number. Sample column, fixed disclosed thresholds: under 10 trades is Low (do not optimize on it), 10-29 is Preliminary, 30+ is More reliable -- still not proof. Never treat a tiny 100% segment as stronger evidence than a large one just because the percentage looks better.

- Pattern "OI-Confirmed Momentum" outperforms "Range-Pinned" by Rs 5,502 net (25 vs 21 trades).

### By Grade

| Segment | Trades | Sample   | Win Rate | Net P&L (Rs) | Profit Factor |
|---------|--------|----------|----------|--------------|---------------|
| A       | 45     | Reliable | 55.6%    | 57,422       | 2.34          |
| A+      | 1      | Low      | 0.0%     | -1,148       | 0.0           |

### By OI Confirmation

## Worst Drawdowns

The 5 deepest peak-to-trough declines in account value, worst first. 'Recovered' shows when equity climbed back to the pre-drawdown peak -- '-' means it hasn't yet. 'Trades' is how many trades closed while still underwater, from the peak to recovery (or to now, if still Ongoing).

| # | Depth (Rs) | Depth % | Peak Date        | Trough Date      | Recovered        | Status    | Trades |
|---|------------|---------|------------------|------------------|------------------|-----------|--------|

| 4 | -6,080     | -3.59%  | 2026-08-31 15:30 | 2026-08-31 15:30 | 2026-09-01 15:15 | Recovered | 3      |
| 5 | -4,516     | -2.45%  | 2026-09-02 10:04 | 2026-09-02 11:04 | 2026-09-02 14:21 | Recovered | 2      |

## Daily Return Distribution

How many days landed in each return range. Red bars = losing days, green = winning days. A cluster of tall bars near zero with a few scattered further out is normal -- most days small, a few days big.

## Monthly Performance

Total P&L for each calendar month. A month can only show one bar even if it had both winning and losing days inside it -- see Daily Return Distribution above for the day-by-day win/loss split.

| Month   | P&L (Rs) | Trades |
|---------|----------|--------|
| 2026-08 | 26,422   | 35     |
| 2026-09 | 29,852   | 11     |

## Trade Log

All 46 resolved trades, most recent first.
